***Allowable Subject Matter***

1. Claims 28-36 are allowed.
2. The following is an examiner's statement of reasons for allowance: the instant application is deemed to be a nonobvious improvement over the invention of WO 99/00203. The improvements comprise a shot sleeve with a vertical axis and a shot piston that together define a shot chamber above the shot piston that has a horizontal width substantially greater than its vertical depth, wherein a solid metal is melted, the molten metal is treated with a grain refiner, the molten metal is transferred into the shot chamber, the molten metal is cooled within the shot chamber to within a predetermined temperature range without stirring to form a semi-solid slurry, the piston is moved upwardly to inject a central portion of the slurry into a die cavity through a gate opening within a central portion of the shot chamber, and then the slurry is allowed to solidify within the die cavity to form the metal part.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hong et al. (U.S. 2004/0055726) is cited of interest for illustrating the state of the art in semisolid casting.
